

Media Hopper Create

[Media Hopper Create](#) is the name given to the University of Edinburgh's in-house video streaming service. Media Hopper Create, which runs Kaltura, is the easy way to make, share, and manage your media assets.

[Download the Media Hopper Create recorder](#) to select your inputs (camera/screen/mic) and record a presentation. With one click you can publish this to Media Hopper Create and select your audience and license. You can also import video assets from third party platforms such as YouTube and Vimeo to keep all your assets in one place. Integrate these with your Learn or Moodle course for a seamless experience for your students.

Further information on Media Hopper Create can be found on the UoE [support pages here](#).
